Life characteristics		
Mechanical Life	300,000 cycles	
Resistivity load life (L/R ≤ 1 ms)	See next page	
Capacitive load life (RC=1ms , only for connecting)	360A	50,000 cycles
Note: For capacitive load life, when the contactor is used to control the main circuit of charge and discharge, the pre-charge circuit should be added. If there is no pre-charging path, a transient large current will be generated when the contactor closes, which may cause the contactor to stick.
